

Invoice — Row Split Test

The outer table rows intentionally use `page-break-inside: auto`. The Project ③ **Model Observability** row, which straddles the page boundary, should be split in the middle of its inner nested table. Each backend (Gotenberg / WeasyPrint / DocRaptor) handles "where the row is cut / whether headers reprint on the next page / how borders are rendered" differently.

PROJECT BREAKDOWN — BOUNDARY-CROSSING CASE		
① Data Platform Build (Small)		PRJ-DP-2026-A1 · 2026-03 ~ 2026-05
