

Invoice — Row Split Test

INV-2026-0421 · Issued 2026-05-26 · Bill to: Massive Links, Inc.

The outer table rows intentionally use `page-break-inside: auto`. The Project ③ **Model Observability** row, which straddles the page boundary, should be split in the middle of its inner nested table. Each backend (Gotenberg / WeasyPrint / DocRaptor) handles "where the row is cut / whether headers reprint on the next page / how borders are rendered" differently.
